

ROOF RECYCLING

REDUCING CARBON FOOTPRINT ONE ROOF AT A TIME

No one likes the thought of a re-roofing project on their facility, but when it is time to replace DRI-CON offers a recycling program that allows you to be environmentally conscious and potentially save money in disposal cost. Specialty containers are delivered to the job site, material is loaded as it normally would be and is then promptly delivered to one of the many roof recycling centers we work closely with. EPDM, TPO, PVC, and various insulation types are all able to be recycled. In many cases not only does this process keep excess waste out of landfills but can actually save money. If your company has a Zero Waste jobsite policy this program is the ideal fit to meet your project needs. At DRI-CON we are changing the commercial roofing industry for a brighter, greener tomorrow.

Did you know?

10%

of America's landfill
space is occupied by
roofing waste.

PUBLICITY OPPORTUNITY

DRI-CON's recycling partners offer a certificate verifying the material was in fact recycled. Providing you the perfect opportunity to share this achievement with the community.

REDUCE COSTS

Landfill disposal costs can add up very quickly, especially on a large re-roofing project. The transportation and disposal process is so efficient it could actually save you money.

IT'S THE LAW

Many government entities at the state and local levels, as well as corporations, are now requiring that old rooftop material be recycled and documented.
